MARKET COMMENTARY

Today, DCE iron ore fluctuated during the day and rose slightly by the close. The most-traded I2505 contract finally settled at 783 yuan/mt, up 1.29% throughout the day. Traders sold goods based on market trends, while steel mills remained cautious and purchased as needed. Market transactions were moderate today. In Shandong, the mainstream transaction prices of PB fines were 775-780 yuan/mt, up 0-5 yuan/mt from yesterday. In Tangshan, the transaction prices of PB fines were 785-790 yuan/mt, basically flat compared to yesterday.
According to the SMM survey, as of December 18, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 85.47%, down 0.76 percentage points MoM. The capacity utilisation rate of blast furnaces was 87.01%, down 0.56 percentage points MoM. The daily pig iron production of the sampled steel mills averaged 2.3476 million mt, down 15,000 mt MoM. Demand for iron ore continued to decline. However, this afternoon, the National Financial Work Conference concluded, and CCTV's interpretation of the meeting highlighted a more proactive fiscal policy, with fiscal funds for 2025 to be allocated earlier, faster, and in larger amounts. This stimulated market sentiment, driving iron ore prices to strengthen.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
