MARKET COMMENTARY

DCE iron ore was choppy in the day, the main contract I2309 closed 724,an increase of 0.28% throughout the day. Traders ship according to market conditions. and steel mills purchase with caution.
PBF at Shandong port dealt 788-805 yuan/mt; prices are mixed today over yesterday. SSF at Tangshan port dealt 663 yuan/mt; increased 5 yuan/mt over yesterday. DCE iron ore opened up and then fell, with significant fluctuations due to the impact of news. The overall fundamentals of iron ore have not changed much, but the transaction of building materials has been poor, which has weakened the market mentality. In addition, in the early stage, iron ore prices fell excessively, and the current market valuation is low, with a large basis difference for the 2309 period. The market is bullish and optimistic, and it is expected that short-term ore prices will continue to fluctuate.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
