MARKET COMMENTARY

DCE iron ore futures rose by 0.69% today, the main contract closed at 801.5.The traders' willingness to ship is general.The steel mills are active to purchase.The overall trading sentiment of the market is general. PBF at Shandong port deal 843 yuan/mt,increase 10-13 yuan/mt. PBF at Tangshan port deal 855-864 yuan/mt,increase 5-9 yuan/mt.According to SMM shipping data, the total global iron ore shipment volume of SMM last week was 29.41 million tons, a decrease of 12.9% month on month, with shipments from Australia and Brazil both decreasing. Last week, the total amount of iron ore arriving in China was 21.6086 million tons, a decrease of 7.91% compared to the previous week. On the demand side, the production of molten iron is expected to stabilize and strengthen this week, with fundamentals providing some support for ore prices. Macroeconomic data this week, the Federal Reserve's interest rate meeting, and other factors may affect market sentiment. In the early stage, the rapid rise in mineral prices needs to be prevented from policy regulation, and it is expected that mineral prices will continue to fluctuate in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
