MARKET COMMENTARY

DCE iron ore futures rose by 1.58 % today, the main contract closed at 740.The traders' willingness to ship is general.The steel mills are active to purchase.The overall trading sentiment of the market is better.PBF at Shandong port deal 830-835yuan/mt,increase 2-7 yuan/mt. PBF at Tangshan port deal 840 yuan/mt. Today's MLF interest rate cut has released a positive signal, which helps to enhance market confidence. The market believes that this interest rate cut will continue to reduce the financing costs of the real economy and promote the recovery of the economy. But today's macro data release shows that real estate development investment has decreased both month on month and year on year, hedging some optimistic sentiment. Considering the short-term strong support of supply and demand for mining prices, there is no definitive document on the level control policy, and there is no change in the procurement pace of steel mills. It is expected that the short-term mining prices will be mainly strong and volatile.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
