MARKET COMMENTARY

DCE iron ore futures rose today by 1.36%.the main contract I2401 closed 969.5. some traders were active to sell, Some steel mills tended to be wait-and-see, and purchased on demand. total transactions is poor.
PBF at Shandong port dealt 985 yuan/mt; increased 5 yuan/mt over yesterday. SSF at Tangshan port dealt 873 yuan/mt; Although terminal demand has entered the off-season, the apparent demand for finished products announced today is still acceptable. This indicates that the demand for steel is full of toughness. In addition, although the inventory of building materials has started to accumulate, the magnitude is relatively small, and overall, the steel is still in a state of destocking, still showing a steady off-season. The market has sufficient information on black series. And there are strong expectations for the important meeting and winter storage in December, with the overall rebound of the black series and the largest increase in iron ore. In the later stage, when the fundamentals weaken, it is expected that there may be insufficient upward momentum for iron ore, and the short-term trend will continue to fluctuate at high levels.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
