MARKET COMMENTARY

DCE iron ore futures declined by 0.36 % today, the main contract closed at 966. The steel mills are not active to purchase.The overall trading sentiment of the market is general. PBF at Shandong port deal 975 yuan/mt. SSF at Shandong port deal 870 yuan/mt. According to SMM statistics, the impact of blast furnace maintenance on molten iron this week has increased by 22.55 million tons compared to last week's maintenance. Next week, there will be a month on month decrease. Based on the current profitability of the blast furnace, it is expected that both the operating rate and capacity utilization rate of the blast furnace will experience a pullback. This week, the demand side has been slightly affected by environmental inspections, and the fundamental support has slightly loosened. The Politburo meeting and economic meeting are approaching, and the expectation of policy easing is still ongoing. However, considering regulatory pressure and other risks, it is expected that iron ore prices will fluctuate widely in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
