MARKET COMMENTARY

DCE iron ore futures fall today. the main contract I2405 closed 955. an decrease of 0.37% throughout the day. some traders were negative to sell, steel mills purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 998 yuan/mt; decreased 12 yuan/mt from last Friday. PBF at Tangshan port dealt 1009-1015 decreased 3-10 yuan/mt from last Friday.
SMM shipping data shows that the total global shipment volume is 33.05 million tons, a decrease of 2% compared to the previous month. There has been a slight increase in shipments to Australia this cycle, but a significant decline in shipments to Brazil has dragged down global shipments slightly. The total arrival volume at the port was 27.1197 million tons, an increase of 2.77% compared to the previous month. The supply remains relatively loose. Adding to the poor performance of weekend CPI, PPI, and real estate data, market sentiment has weakened and iron ore prices have moved downwards. In the later stage, there will be little change in the fundamentals of iron ore, mainly focusing on macro policy news and regulatory risks.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
