MARKET COMMENTARY

DCE iron ore futures fell sharply today, the main contract closed 565.5, an decrease of 9.95% throughout the day; the quotation in the morning was decreased follow the disk. Market wait-and-see sentiment increased; some traders have significantly adjusted their prices. Steel mills bought on their demands. total transactions remained insipid. SSF at Shandong port dealt 385-410 yuan/mt, decreased 40-55 yuan/mt over yesterday ; PBF at Tangshan port dealt 750 yuan/mt, ; decreased 50 yuan/mt from last week. According to data tracked by SMM, 80 ships arrived at domestic main ports from October 25-31. Arrivals of cargoes are estimated to stand at 11.89 million mt, down 2.16 million mt from the previous week and 2.9 million mt year on year.Shipments that departed Australian ports were estimated to increase 1.93 million mt week on week to 19.58 million mt, up 2.83 million mt on the year; and that from Brazilian ports decreased 0.71 million mt to 3.46 million mt on a weekly basis, down 5.04 million mt on the year. The total arrivals of imported ore dropped from the prior week, but the combined shipments from Australia and Brazil rose.

In China, many steel mills have suspended the production of their blast furnaces amid environmental protection warnings triggered by poor air conditions in Hebei, Henan and Shanxi, coupled with the extreme weathers in north China. Therefore, the output of liquid iron is unlikely to pick up. Meanwhile, the port inventory of imported ore has exceeded 140 million mt, which is unable to support iron ore prices from the fundamental front. As such, iron ore prices will stay weak.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
