MARKET COMMENTARY

DCE iron ore futures rose largely today, the main contract closed 894.5, an increase of 1.07% throughout the day; Today's overall trading atmosphere is still relatively good, with the price of PB powder in Shandong region trading at 890-895 yuan/ton, an increase of 5-10 yuan/ton from last Friday. According to SMM shipping data, the global iron ore shipping volume is 31.12 million tons, an increase of 3.7% compared to the previous period. Among them, Australia shipped 17.37 million tons, a decrease of 6.7% compared to the previous period; Australia shipped 17.37 million tons to China, accounting for 90.5% of Australia's total shipping volume, an increase of 1% compared to the previous period. Brazil shipped 6.21 million tons, an increase of 3.3% compared to the previous period; overall shipping is showing a slightly loose state. Currently, macro news is more positive, but considering the weak profitability of steel mills, the willingness to lower prices may be stronger, and it is expected that iron ore prices will remain volatile in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
