MARKET COMMENTARY

Today, iron ore fluctuated upward, with the most-traded contract I2501 closing at 792 yuan, up 1.08% for the day. Traders were actively selling, while steel mills remained cautious and had moderate purchase willingness. The market trading atmosphere was moderate. In Shandong, the mainstream transaction prices for PB fines were 775-780 yuan/mt, up 5-10 yuan/mt from yesterday; in Tangshan, the transaction prices for PB fines were 790-795 yuan/mt, also up 5-10 yuan/mt from yesterday. According to an SMM survey, on November 27, the operating rate of blast furnaces in 242 surveyed steel mills was 89.16%, down 0.67% WoW. The capacity utilisation rate of blast furnaces was 89.75%, down 0.80% WoW. The daily pig iron production of the sample steel mills was 2.4 million mt, down 21,500 mt WoW. The fundamentals of iron ore continued to weaken. However, market rumors suggested that the Politburo meeting in December might be held earlier, which boosted market expectations. Additionally, some steel mills started purchasing imported cargo to increase inventory, providing strong support for ore prices.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
