MARKET COMMENTARY

Today, iron ore fluctuated upward, with the most-traded contract I2501 closing at 806 yuan/mt, up 1.26% for the day. Traders are optimistic about the market outlook and are actively selling; however, steel mills are cautiously observing, resulting in a decrease in inquiries. The market trading atmosphere was moderate today. In Shandong, the mainstream transaction prices for PB fines were 790-795 yuan/mt, up 10 yuan/mt compared to last Friday; in Tangshan, the transaction price for PB fines was 805 yuan/mt, also up 10 yuan/mt compared to last Friday.

Last week, SMM reported global iron ore total shipments of 33.35 million mt, up 1.4% WoW. Both Australia and Brazil saw increases in total shipments, but the proportion shipped to China slightly decreased. Additionally, due to previous shipment declines and domestic weather impacts, SMM reported China's total iron ore arrivals at 25 million mt, down 5.27% WoW. In the short term, the market may continue to operate at low levels. However, as the meeting approaches, market expectations for the meeting are growing stronger, driving iron ore prices to continue rising. In the short term, the market may continue to fluctuate upward.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
