MARKET COMMENTARY

Today, iron ore futures fluctuated upward throughout the day, with the most-traded contract I2501 closing at 808.5 yuan/mt, up 1.57% for the day. Traders were actively selling, while steel mills remained cautious and purchased as needed. The market trading atmosphere was average today. In Shandong, mainstream transaction prices for PB fines were 790-795 yuan/mt, up 10 yuan/mt compared to last Friday; in Tangshan, transaction prices for PB fines were 805-810 yuan/mt, up 10 yuan/mt compared to last Friday.

Today's Central Political Bureau meeting conveyed numerous positive signals, boosting market sentiment and enhancing confidence in China's economy for 2025. This drove up ore prices. From a fundamental perspective, last week's SMM data showed a significant decline in global shipments. On the demand side, due to environmental protection-driven production restrictions in Handan, Hebei, some steel mills plan to shut down blast furnaces for maintenance, which is expected to significantly reduce pig iron production. In the short term, although the supply and demand fundamentals of the iron ore market remain weak, prices may continue to fluctuate upward under the influence of optimistic macro sentiment.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
