MARKET COMMENTARY

Today, DCE iron ore futures opened lower but moved higher, fluctuating upward throughout the day. The most-traded I2505 contract finally closed at 775.5 yuan/mt, up slightly by 0.98% for the day. Traders showed moderate willingness to sell, while steel mills remained cautious, with limited inquiries. The market transaction atmosphere was moderate today. In Shandong, mainstream transaction prices for PB fines were around 770-775 yuan/mt, up 10-15 yuan/mt from last Friday. In Tangshan, PB fines transaction prices were 785-790 yuan/mt, also up 10-15 yuan/mt from last Friday.

Last week, SMM reported global iron ore shipments at 34.74 million mt, up 6.8% WoW. Among them, Australian shipments were 19.49 million mt, up 9.6% WoW, while Brazilian shipments were 8.04 million mt, down slightly by 1.2% WoW. SMM also reported China's iron ore arrivals at 25.75 million mt, up 1.9% WoW. Both shipments and arrivals increased simultaneously. Iron ore supply remained ample. However, the industry imbalance was relatively small, with steel mills still maintaining profits, and pig iron production may have hit bottom and stabilized. In the short term, iron ore prices are expected to fluctuate rangebound.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
