MARKET COMMENTARY

Today, iron ore fluctuated downward and finally closed at 797, with a daily decline of 1.12%. Traders shipped goods in line with the market; steel mills reduced inquiries, and some have tender plans. The market transactions were sluggish today. In the Shandong region, the mainstream transaction prices for PB powder were around 790 yuan/mt, down 10 yuan/mt from yesterday; in the Tangshan region, the transaction prices for PB powder were around 805 yuan/mt, down 5-10 yuan/mt from yesterday.

The central economic meeting held yesterday essentially continued the spirit of the previous political meetings and was in line with market expectations. As short-term macro policies are gradually implemented, the market focus has returned to fundamentals. Affected by environmental protection-driven production restrictions in Hebei, pig iron production may slightly decrease, leading to weakened demand for iron ore and a sluggish fluctuation in ore prices. However, considering the potential for RRR cuts next week and the relatively small supply-demand imbalance in the industry chain, iron ore prices are expected to fluctuate at high levels next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
