MARKET COMMENTARY

Today, iron ore futures continued to drop slightly, with the most-traded I2505 contract closing at 769 yuan/mt, down 0.77% for the day. Traders showed low enthusiasm for selling, while steel mills remained cautious and exhibited average purchase willingness. Market transactions were sluggish today. In Shandong, mainstream transaction prices for PB fines were at 765-770 yuan/mt, down 5 yuan/mt from yesterday. In Tangshan, PB fines transaction prices were around 780 yuan/mt, also down 5 yuan/mt from yesterday.

As of December 20, total inventory at 35 ports monitored by SMM stood at 145.85 million mt, down 810,000 mt WoW but up 30.23 million mt YoY. The daily average port pick-up volume of imported ore was 3.132 million mt, down 109,000 mt MoM but up 670,000 mt YoY. Affected by annual maintenance at some steel mills and environmental protection-driven production restrictions, pig iron production declined significantly. Coupled with falling ore prices, steel mills' purchase willingness weakened, leading to a notable drop in port pick-up volume. Looking ahead to next week, the fundamentals of iron ore are expected to remain weak, with ore prices likely to continue fluctuating downward.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
