MARKET COMMENTARY

Today, iron ore futures dropped significantly. The most-traded I2505 contract closed at 759.5 yuan/mt, down 2.63% from yesterday. Traders showed weak willingness to sell, while steel mills made limited purchases. Market transaction sentiment was sluggish today. In Shandong, mainstream transaction prices for PB fines were around 760 yuan/mt, down 10-15 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were 775 yuan/mt, also down 10-15 yuan/mt from yesterday. As of December 27, according to SMM monitoring data, total inventory at 35 ports stood at 144.99 million mt, down 860,000 mt WoW but up 28.15 million mt YoY. The daily port pick-up volume of imported ore averaged 3.127 million mt, down 4,000 mt MoM but up 270,000 mt YoY. Affected by earlier ore shipment volumes, this week's port arrivals dropped significantly. On the port cargo pick-up side, winter stockpiling by steel mills was not active, with most adopting a purchasing-as-needed strategy, leading to a slight decline in port pick-up volume. Overall, due to the significant drop in port arrivals, port inventory showed a destocking trend. Looking ahead to next week, port arrivals are expected to increase. Based on SMM's current tracking, pig iron production at steel mills' blast furnaces may continue to decline, and port pick-up volume may also decrease, potentially leading to a slight accumulation in port inventory.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
