MARKET COMMENTARY

DCE iron ore futures fluctuated narrowly throughout the day, the physical port quotations were relatively stable over yesterday's deal price. Following yesterday's increased market transactions, steel mills are not willing to buy raw materials with a relatively high price, total deal atmosphere decreased today. However, some traders are still not willing to sell while others sell normally considering the production restrictions expectations. PBF at Shandong port dealt 1480yuan/mt, down 5-10yuan/mt over yesterday; Yandi fines dealt 1195yuan/mt, down 5yuan/mt. Iron ore imported fell slightly by 0.42% MoM to 89.417 Mt, down as much as 12.06% YoY. Considering the expectation of production restrictions, iron ore demand still hard to increase largely. In addition, recent domestic port inventory continued to rise especially Lanqiao port, local steel mills buy on their demand; also, one SOE steel mill transfer their iron ore imported volume via long-term agreement to physical port selling, which resulting from production regulation policies.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
