MARKET COMMENTARY

Iron ore quotations in the physical port stock market inched down gradually when DCE iron ore futures market vibrated vulnerably. Total transactions concluded to be insipid as mills remained on-demands procurements. PBF was closed at 1470-1480yuan/mt in Shandong market, with price falling of 10-20yuan/mt over last Friday, and that in Tangshan market declined by 25yuan/mt to 1470yuan/mt. Mills' demands for Low-grade SSF picked up continuously due to the increasing cost performance, especially when the price spread between PBF and SSF expanded continuously to 460yuan/mt. Some steel mills told SMM, their sales of steel products slowed down even though steel prices bounced up again. Besides, Tangshan government initiated mitigation measures for ozone weather from last weekend to Jul 23, 2021, the transportation of heavy cargo vehicles will be restricted during this period, steel mills purchasing intentions in the short run will slack off.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
