MARKET COMMENTARY

According to data tracked by SMM, 80 ships arrived at domestic main ports from July 18-24. Arrivals of iron ore are estimated to stand at 11.98 million mt, down 650,000 mt from the previous week, and a decrease of 2.98 million mt from the same period last year. Shipments that departed Australian ports were estimated to increase 1.16 million mt week on week to 16.7 million mt, basically flat on the year, and that from Brazilian ports increased 490,000 million mt to 7.12 million mt on a weekly basis to 7.12 million mt, and up 390,000 mt on the year. The iron ore arrivals at Chinese ports kept falling for three consecutive weeks, but domestic demand weakened as well amid the expanding production cuts. More ships departed from both Australian and Brazilian ports, but domestic profits for steel mills rebounded rapidly recently, supporting the iron ore prices. Iron ore prices will continue to fluctuate within a narrow range. Traders in the physical port stock market adjusted down their quotations when DCE iron ore futures market headed for downward tendency, and PBF was closed at 1365-1375yuan/mt, with price down of 15-25yuan/mt over yesterday. Some steel mills' inquiries picked up given their recent rising profits.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
