MARKET COMMENTARY

Iron ore quotations in the physical port stock market declined by 15-20yuan/mt early this morning, while traders performed to be firm on their quotations gradually when DCE iron ore futures market recovered. PBF was concluded at 1365-1378yuan/mt in Shandong market and that in Tangshan was 1360yuan/mt, a price hike of 5yuan/mt over yesterday. According to SMM, mills profits for rebar and HRC ascended to 522yuan/mt and 875yuan/mt, based on iron ore price of 205USD/mt, which promoted mills demands for mainstream medium products again. However, along with more and more steel mills started conducting maintenance in Jiangsu and Liaoning provinces, their purchasing enthusiasm fell off. Iron ore prices will still run under pressures.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
