MARKET COMMENTARY

DCE iron ore futures market vibrated narrowly and quotations in the physical port stock market dropped by 40yuan/mt over last Friday. Steel mills' purchasing intentions picked up and some trader gradually up adjusted their quotations by 5-10yuan/mt. PBF was closed at 1260yuan/mt in Shandong market, with price down of 30yuan/mt over last Friday. And prices for SSF have been less than 900yuan/mt. SMM's data showed iron ore inventory at domestic ports have accumulated for five consecutive weeks, while meanwhile, more and more steel mills plan to conduct maintenance, iron ore demands still have room to fall. Besides, the bearish sentiment continues to envelop the market as market players have growing expectations on crude steel output reduction. But total transactions in the physical ports stock market warmed up due to mills' considerable profits, while their in-plant inventory hovered at low levels.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
