MARKET COMMENTARY

According to data tracked by SMM, 74 ships arrived at domestic main ports from July 25-31. Arrivals of cargoes are estimated to stand at 11.85 million mt, down 130,000 mt from the previous week, and a decrease of 3.11 million mt from the same period last year. Shipments that departed Australian ports were estimated to decrease 170,000 mt week on week to 16.53 million mt, and that from Brazilian ports increased 670,000 million mt to 7.79 million mt on a weekly basis, up 14.1 million mt on the year. Futures and spot prices of iron ore rebounded slightly this week after last week's sharp decline. The intensive maintenance since July in some companies have been completed recently. The in-plants inventories were low, and some companies purchased large amounts of iron ore, driving the iron ore prices to rebound. The profits for steel mills also rose rapidly, boosting the market prices. However, the iron ore price trend will still depend on the actual implementation of production cuts. The physical port stock prices mixed with small ups and downs, and PBF in Shandong market was closed at 1255-1265yuan/mt, mills' purchasing intentions remained considerable.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
