MARKET COMMENTARY

DCE iron ore futures market plummeted sharply today and the actual transaction prices declined further although some traders in the morning held their quotations firm. PBF in Shandong market was concluded at 1210-1225yuan/mt, with price down of 35-55yuan/mt over yesterday. Low grade iron ore product of SSF was closed at 825yuan/mt in Shandong market, fell by 65yuan/mt. As for iron ore demands, SMM's blast furnace operating rates this week declined by 0.1% to 81.1% over last week, and some steel mills who have no production cut missions started increasing their purchasing given their previous low-level raw materials inventory in plants. SMM's latest data showed, the iron ore inventory at domestic major six ports decreased, especially obvious decrements in mainstream fines and lump products, which may offer certain supports to iron ore prices in the short run.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
