MARKET COMMENTARY

As of August 6, iron ore inventories across 35 ports tracked by SMM totaled 118.46 million mt, down 2.24 million mt from the previous week, but up 12.24 million mt year-on-year. Daily average deliveries from the 35 ports increased 323,000 mt on a weekly basis to 2.6 million mt this week. Port arrivals in Tangshan have been declining for three consecutive weeks and deliveries from ports picked up after the impact of bad weather has receded, allowing inventory at local two ports to fall 2.1% to 28.51 million mt. Port inventory in the Yangtze River region also declined as steel mills went bargain hunting after typhoon ended. However, the decline in port inventory may slow down as steel mills will restock only as required under output cut policy. Another 30-35yuan/mt price falling happened in the physical port stock market today as DCE iron ore futures market showed no improvements. Majority steel mills remained on-demand procurements and PBF was closed at 1175-1215yuan/mt in Shandong market. Along with steel mills' increasing purchase, iron ore prices in the short run may enjoy certain supports.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
