MARKET COMMENTARY

A total of 94 vessels carrying 15.17 million mt of iron ore arrived at major Chinese ports during August 1-7, SMM estimates. The amount rose 3.11 million mt from the prior week and up 2.52 million mt from the same period last year. In the same period, iron ore deliveries leaving Australian ports added 2.10 million mt on the week to 18.63 million mt, and rose 3.71 million mt from the same period last year. While those leaving Brazilian ports declined 1.51 million mt on the week to 6.28 million mt, and fell 0.94 million mt from the same period last year. Iron ore arrivals in China and exports from Australia both increased significantly. Recently, Tangshan released its Air Quality Assurance Scheme for 2022 Winter Olympics, which urged crude steel output in Hebei to be decreased by 21.71 million mt throughout 2021. Tangshan will bring down its total output by 12.37 million mt. Iron ore demand will keep sluggish, pressuring iron ore prices. There was another 20-25yuan/mt price down in the physical port stock market early this morning, the market activities picked up and some steel mills purchased successively. Transactions for low grade products warmed up, PBF was closed at 1155-1170yuan/mt in Shandong market, with price declining of 20-35yuan/mt over yesterday.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
