MARKET COMMENTARY

According to data tracked by SMM, 78 ships arrived at domestic main ports during August 9-15. Arrivals of iron ore cargoes are estimated to stand at 12.49 million mt, down 2.68 million mt from the previous week, and a decrease of 2.32 million mt from the same period last year. Shipments that departed Australian ports were estimated to decrease 4.39 million mt week on week to 14.24 million mt, down 2.07 million mt year on year, and that from Brazilian ports decreased 270,000 mt to 6.01 million mt on a weekly basis, down 1.58 million mt on the year. The shipments from Australian ports declined due to the port overhaul, and the arrivals of imported ore decreased, so the supply of iron ore did not further increase in the short term. However, considering that some blast furnaces are still under maintenance at the smelters in Jiangsu, iron ore prices are expected to be dragged down by the weak demand. Iron ore physical prices dropped further when DCE iron ore futures market vibrated vulnerably, PBF was closed at 1105-1125yuan/mt in Shandong market and at 1115yuan/mt in Tangshan market, with price down of 5-20yuan/mt over yesterday.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
