MARKET COMMENTARY

DCE iron ore futures continued to downward today, main contract I2201 decreased by 3.73% throughout the day. The spot price in the morning has lowered by 10 yuan/mt from yesterday. Steel mills are more likely to buy cautiously due to the continuously decreasing iron ore price, and the overall deal atmosphere was depressed today. Some steel mills think that the price will hover at low level in the short term, so they buy raw materials on their demand. PBF at Shandong port dealt 1083yuan/mt, down 22-42 yuan/mt over yesterday; SSF at Shandong port dealt 750-760yuan/mt, down 10-20yuan/mt. Recently imported iron ore inventory continued to gradually increase, spot iron ore price still has more pressure to rise. Furthermore, steel price also decreasing due to unforeseeable steel demand, the support effect on iron ore price has gradually decreasing.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
