MARKET COMMENTARY

DCE iron ore futures began to get warm after continuously falling price, main contract increased by around 6.2% in a day. The spot quotation has kept almost stable over yesterday in the morning, but with gradually increasing futures, traders tend to upside their quotation. While steel mills tend to buy during this kind of increasing market, the deal atmosphere was taken a turn for the better. PBF at Shandong port dealt 1005-1035yuan/mt, up 5-35yuan/mt; PBF at Tangshan port dealt 998-1015yuan/mt, up 0-17yuan/mt. PBF at Jiangnei port dealt 1060-1095yuan/mt, ups and downs over yesterday. According to data tracked by SMM, 81 ships arrived at domestic main ports from August 16-22. Arrivals of cargoes are estimated to stand at 13.26 million mt, up 770,000 mt from the previous week, but down 1.27 million mt year on year. Shipments that departed Australian ports increased 2.37 million mt week on week to 16.61 million mt, and that from Brazilian ports increased 1.11 million mt to 7.12 million mt on a weekly basis, but down 80,000 mt on the year. Supply trended higher as shipments from Australia continued to increase amid the end of port maintenance and port stocks were accumulating in China. Iron ore prices are likely to rise after the continuous plunge. Some steel mills increased restocking volume at low prices due to lower inventories, supporting iron ore prices, to some extent.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
