MARKET COMMENTARY

DCE iron ore fluctuated slightly today, the spot quotation in the morning increased by 20-25yuan/mt from yesterdays' morning quotation. Some steel mills tend to inquiry and traders sell actively that resulted from the previously low market price. Traders tend to give quite lower bargain space today. PBF at Shandong port dealt 1025-1030yuan/mt, up 5-25yuan/mt over yesterday's deal price. One steel mill told that they tend to buy on a frequent basis with less amount under current market situation. Although some BFs overhaul currently, the remaining BFs still support the iron ore demand. In addition, steel price maintained a quite high level with resilient steel price; according to $138 iron ore price, the rebar profits of long-process steel mills has reached 855yuan/mt while HRC even reached to more than 1200yuan/mt, good steel profit still support iron ore price, to some extent.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
