MARKET COMMENTARY

DCE iron ore futures fell sharply today, the main contract decreased by around 7.8% in a day. The spot quotation in the morning has increased by 10yuan/mt over yesterday, while traders gradually lowered the quotations and accepted the bargain space, although they had bad selling mood today. PBF at Shandong port dealt 1020yuan/mt, fell by 70yuan/mt; presell PBF at Shandong port dealt 1010-1015yuan/mt, fell by 50-55yuan/mt over yesterday. Recently, Guangxi has issued the policy on the energy control so as to require steel mills to cut production in the following days this year. Also, one large-scaled steel group are required to control their crude steel production that less than last years' output before the end of November, which all caused the extremely bear news on iron ore price. It expects that the iron ore price will be likely to be a low level in the short-term, but the recovering steel demand still need to be focus, that could support iron ore price after releasing the pessimistic mood, to some extent.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
