MARKET COMMENTARY

DCE iron ore futures market remained vulnerable tendency, and the physical port stock market inched down continuously. Prices for domestic concentrates dropped sharply as well. Majority steel mills held their purchasing on demands as some of them see bearish of iron ore market. More and more steel mills started conducting production cuts and some of their iron ore in-plant inventory accumulated. However, some steel mills increased their purchasing for iron ore in the past few weeks when iron ore prices plummeted sharply, they told SMM, they have increased their in-plant inventory in consideration of the upcoming National Day holiday. The transactions in the physical port stock market warmed up although the quotations in the morning declined by 30yuan/mt. PBF in Shandong market was closed at 1020-1025yuan/mt while that in Tangshan market was 1085yuan/mt. The supply shortage of PBF in Tangshan market caused the expanding price gap between that in Shandong and Tangshan markets.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
