MARKET COMMENTARY

As of September 3, iron ore inventories across 35 ports tracked by SMM totalled 122.55 million mt, up 1.09 million mt from a week ago and 15.26 million mt from a year ago. Daily average deliveries from the 35 ports decreased by 24,000 mt on a weekly basis to 2.67 million mt last week. The sharp decline in imported ore prices and output cuts at many steel mills curbed purchase activities. Despite fewer arrivals, inventory at the two main ports in Shandong began to increase as the efficiency of port operations has picked up. In contrast, inventory at the two main ports in Tangshan continued to decline due to three consecutive weeks of decline in arrivals and stable purchases by steel mills. Port inventory is likely to rise further due to growing arrivals and steel mill output cuts. DCE iron ore futures began to rise slightly today, the spot iron ore quotations basically kept stable. Traders were active to sell while steel mills tended to buy on their demand. The total deal atmosphere was not good over yesterday. PBF at Shandong port dealt 1020-1030yuan/mt, slightly increase by 0-5yuan/mt; PBF at Tangshan port dealt 1080yuan/mt, slightly decrease by 0-5yuan/mt.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
