MARKET COMMENTARY

DCE iron ore futures continued to fluctuate downward today, main contract has hit the lowest 696 point this year. The spot quotation in the morning has decreased 5yuan/mt by some traders, then continued to lower the quotation during trading. Also some trades were not willing to quote today due to their pessimistic mind on iron ore price. Steel mills tend to buy on their demand, few buy in order to restock before mid-autumn festival. PBF at Shandong port dealt 920-925yuan/mt, decrease by 35-45yuan/mt; PBF at Tangshan port dealt 1000yuan/mt, decrease by 20-25yuan/mt; PBF at Jiangnei port dealt 950yuan/mt. After Guangxi, Jiangsu province, recently Yunnan province issued the energy-consumption policy that all steel mills should adjust their production sequence(proportion shouldn't be less than 30% of monthly appraisal target) until the end of this year. Previously, 9 provinces including Qinghai, Ningxia, Guangxi, Guangxi, Fujian, Xinjiang, Yunnan, Shaanxi, Jiangsu province are listed high energy-consumption provinces, which marked level I warning. It expects that the production control for these places will likely to enhance in the following days. Additionally, according to SMM, some steel mills closed their part of BFs today to answer local energy-consumption control. Pig iron production will be expected to decrease this week under the background of production restriction, iron ore price will accordingly decrease to some extent.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
