MARKET COMMENTARY

DCE iron ore futures performed relatively strong today, main contract has risen by more than 3.5%; the spot quotation increased by around 20-30yuan/mt over yesterday in the morning. Affected by replenishment and gradually increasing iron ore price, the enthusiasm for inquiries were quite positive today; some traders were active to sell and the bargain space was limited. PBF at Shandong port dealt 825-845yuan/mt, up around 10-60yuan/mt over yesterday. Recently, nearly 14 provinces, including Jiangsu, Shandong, Zhejiang, Yunnan, and Shaanxi, have successively introduced power curtailment measures, many steel mills closed furnaces or decreased their steel output. According to SMM data, the affected pig iron will be expected to increase by 44% this week from last week, it is difficult for changing weak iron ore demand. However, before National Day Holiday, some steel mills that are not affected strictly still have a rigid demand for replenishment; coupled with the three consecutive declines in inventories of imported iron ore, which support iron ore price in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
