MARKET COMMENTARY

DCE iron ore futures market rose by 5% in the first trading day after the National Day holiday, traders offered relatively stable quotations in the morning while successively up adjusted their quotations when DCE iron ore futures market vibrated upward. Some steel mills increased their procurements after the consumptions during the holiday and meanwhile, some steel mills in East China are expected to resume certain production after previous strict reduction, total transactions warmed up clearly. Some traders see bullish in the short run and thus, they tended to hold their prices firm today. PBF was closed at 870-875yuan/mt and 865-880yuan/mt in Shandong and Tangshan market separately, with price hike of 25-30yuan/mt over that before the holiday.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
