MARKET COMMENTARY

DCE iron ore futures continued to drop today, main contract closed 711, a decrease of 2.27% throughout the day. The spot quotation in the morning decreased by around 20-30 yuan/mt from last Friday. Some steel mills tended to be wait-and-see due to decreasing iron ore price, and the purchasing enthusiasm was not higher than expected. The overall deal atmosphere was general today.PBF at Shandong port dealt 855 yuan/mt, down 15-25 yuan/mt from last Friday; PBF at Tangshan port dealt 875 yuan/ton, down 5 yuan/mt;According to SMM research, the recent news of power rationing in many places has gradually been stricter, and one large-scale steel mill that locates at South region decided to overhaul their 3200m³ blast furnace.SMM tracking data shows that the pig iron production resulted from BFs overhaul has continued to rise by 18.6% from last week, the weak demand still exert pressure on iron ore price.Additionally, imported iron ore port inventory has accumulated for three consecutive weeks while steel mills were difficult to buy much more, iron ore price will be expected to remain vulnerable run.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
