MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day, main contract closed689.5. a decrease of 1.5% throughout the day 。 The spot quotation in the morning almost kept steady.Most traders tended to be wait-and-see ， and the purchasing number is small。 PBF at Shandong port dealt 840 yuan/mt, increased 22 yuan/mt over yesterday; PBF at Tangshan port dealt 850 yuan/mt, ； The iron ore inventories across 35 ports tracked by SMM totalled 138.77 million mt as of October 22, an increase of 950,000 mt from the previous week and 11.58 million mt on the year. The increase of port inventory slowed as the arrivals of iron ore at ports declined. The daily deliveries from the ports rose 78,000 mt to 2.67 million mt. The steel mills ramped up their restocking of iron ore as the power rationing policy has loosened recently, driving the daily deliveries from main ports to increase. The two main ports in Tangshan have been banned from making deliveries since October 19. The daily deliveries at these main ports fell 86,000 mt MoM to 174,000 mt.The inventory in Tangshan rose sharply. The port inventories of imported iron ore are expected to increase further as north China is likely to be subject to power rationing.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
