MARKET COMMENTARY

DCE iron ore futures continued to rise in a day, main contract closed 714.5. a increase of 3.03% throughout the day, The spot quotation in the morning almost kept steady. Some steel mills tend to buy due to suitable price while some traders were active to sell, with relatively stable price today, PBF at Shandong port dealt 850 yuan/mt, the same as yesterday; PBF at Tangshan port dealt 845-860 yuan/mt, ; decreased 0-10 yuan/mt over yesterday. PBF at Jiangnei port dealt 860 yuan/mt.According to data tracked by SMM, 92 ships arrived at domestic main ports from October 18-24. Arrivals of cargoes are estimated to stand at 14.06 million mt, up 1.92 million mt from the previous week and 0.98 million mt year on year.Shipments that departed Australian ports were estimated to decrease 1.34 million mt week on week to 17.65 million mt, up 3.02 million mt on the year; and that from Brazilian ports increased 0.47 million mt to 4.17 million mt on a weekly basis, down 3.55 million mt on the year.The total arrivals of imported iron ore increased from the previous session, but the combined departures from Australia and Brazil fell slightly. The market has been boosted to some extent as the power rationing policy relaxed in some areas. However, the production in north China is further restricted due to the environmental protection requirements. Meanwhile, the port inventory has been on the rise amid more arrivals, constraining the upside momentum of ore prices. Therefore, the prices are likely to stay congested in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
