MARKET COMMENTARY

DCE iron ore futures fell sharply today, and I2201 hit new low of 671 yuan/mt. an decrease of 4.62% throughout the day;the quotation in the morning was decreased by 30-50 yuan/mt over yesterday. some traders were active to sell, and they were gived more bargain space. Middle and low - price difference contraction is obvious. Some steel mills were active to ask the price. PBF at Shandong port dealt 600 yuan/mt, decreased 65 yuan/mt over yesterday ; PBF at Tangshan port dealt 600 yuan/mt; SMM analysis, Since October, steel transactions have continued to be weak, and the price has fallen sharply. Under the dual influence of superimposed coarse steel reduction and environmental protection production limit, the northern steel mills have been suffering losses. Some steel mills are expected to suspend production of blast furnaces for maintenance, and iron ore demand is expected to further weaken.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
