MARKET COMMENTARY

DCE iron ore futures market falling trends， an decrease of 1.1 % throughout the day. The spot quotation in the morning almost kept steady. some traders quotation is still stronger；steel mills purchased on demand. PBF at Shandong port dealt 600 yuan/mt; the same as yesterday. According to data tracked by SMM, 79 ships arrived at domestic main ports in November 8-14. Arrivals of cargoes are estimated to stand at 12.06 million mt, down 0.64 million mt from the previous week and down 1.26 million mt year on year.Shipments that departed Australian ports were estimated to decrease 3.01 million mt week on week to 16.3 million mt, down 0.89 million mt on the year. And that from Brazilian ports decreased 0.28 million mt to 4.4 million mt on a weekly basis, down 3.5 million mt on the year. The total arrivals of imported ore dropped slightly from the prior week, and the combined shipments from Australia and Brazil also declined significantly.The environmental protection-related restrictions in north China has intensified again recently, leading to the shot down of sintering machines of many steel mills. As such, quite a few steel mills have suffered losses, who may carry out maintenance in the future. The demand for iron ore continues to weaken. The supply of iron ore will surpass demand for some time as the inventory at ports have been rising though the shipments from mines declined. And the iron ore prices will move weakly in the near term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
