MARKET COMMENTARY

DCE iron ore futures rose largely today , an increase of 7.81% throughout the day. The highest price is 598.5, Most traders do not quote prices in the morning,but afternoon the quotation increased compared with yesterday 50-70 yuan/ mt. The enthusiasm of steels works has increased. today's overall market transaction atmosphere is good. PBF at Shandong port dealt 650-660 yuan/mt,increased 55-70 yuan/mt over yesterday. PBF at Tangshan port dealt 630-650 yuan/mt, increased 45-55 yuan/mt over yesterday.According to data tracked by SMM, 79 ships arrived at domestic main ports in November 15-21. Arrivals of cargoes are estimated to stand at 11.83 million mt, down 0.27 million mt from the previous week and down 2.69 million mt year on year.Shipments that departed Australian ports were estimated to increase 2.59 million mt week on week to 18.89 million mt, up 3.82 million mt on the year. And that from Brazilian ports increased 0.79 million mt to 5.18 million mt on a weekly basis, down 1.82 million mt on the year. The total arrivals of imported ore dropped slightly again from the prior week, while the combined shipments from Australia and Brazil rose as a whole.Recently, the market has heightened their estimate regarding steel mills' resuming production due to positive news from the downstream real estate sector, on the combination of the early completion of crude steel output control target by some mills. The intraday most-trade iron ore contract has surged by more than 9% as the time of writing. On the other hand, however, coke prices have been falling for seven consecutive rounds, and the ore prices are also at a low level, restoring part of the steel mills' profits. Hence, ore prices will gain some support in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
