MARKET COMMENTARY

DCE iron ore futures market rose by 4.77% , the main contract closed 614.5. the quotation in the morning was increased by 10-30 yuan/mt from last Friday. some traders were active to sell, steel mills purchased on demand;today's overall market transaction atmosphere is acceptable. PBF at Shandong port dealt 655-670 yuan/mt, increased 20-30 yuan/mt from last Friday; PBF at Tianjin port dealt 695 yuan/mt from last Friday. The weekend, "Omicron" strain caused concern in the global market, peripheral markets fell sharply, but the Confidence of the Chinese market remains, buoyed by the expectation of recent real estate policy relaxation, steel terminal demand has improved, ferrous metals are strong today, especially iron ore I2205 intra up to 5.96%. Pre-overhaul steel mills are expected to partially resume production in December, and the market is looking forward to the recovery of iron ore demand, contributing to the short-term rebound of iron ore.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
