MARKET COMMENTARY

DCE iron ore futures tight，the main contract closed 609.5，an increase of 2.44% throughout the day. The spot quotation in the morning almost kept steady. some traders were active to sell, steel mills purchased on demand.today's overall market transaction atmosphere in general.PBF at Shandong port dealt 660 yuan/mt,the same as yesterday; PBF at Tangshan port dealt 660-665 yuan/mt the same as yesterday; According to data tracked by SMM, 54 ships arrived at domestic main ports in November 22-29. Arrivals of cargoes are estimated to stand at 8.24 million mt, down 3.58 million mt from the previous week and down 6.39 million mt year on year.Shipments that departed Australian ports were estimated to decrease 0.43 million mt week on week to 18.46 million mt, up 2.93 million mt on the year. And that from Brazilian ports decreased 0.23 million mt to 4.95 million mt on a weekly basis, down 2.81 million mt on the year. The total arrivals of imported ore dropped significantly from the prior week, and the combined shipments from Australia and Brazil also declined slightly. The blast furnaces have been resuming the production recently after some steel mills completed the crude steel production control target. Meanwhile, the Level II heavy air pollution alert was clear after the weather turned colder. On the other hand, a total of 10 steel mills in Tangshan were advanced in terms of performance category, and the number of mills categorised as D level has been reduced from 14 to 4. The near-term iron ore prices will gain comparatively support from various bullish news.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
