MARKET COMMENTARY

DCE iron ore futures market falling trends，an decrease of 3.10% throughout the day; the main contract closed 609；some traders quotation is still stronger;steel mills purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 670-680 yuan/mt,decreased 5-10 yuan/mt over yesterday; IOCJ at Shandong port dealt 790 yuan/mt;PBF at Tangshan port dealt 675-680 yuan/mt, decreased 5-10 yuan/mt over yesterday; According to SMM research, this week SMM's blast furnace operating rate was 79.05% on down 0.15% month-on-week. This week the domestic large steel enterprises into the resumption of production cycle, but some small and medium-sized steel enterprises due to energy consumption and crude steel output standards shut down, blast furnace operating rate growth is small. Follow- up, in December, some large state-owned enterprises in northeast and North China will continue to resume and put into production, short-term blast furnace operation rate still has room to rise, good ore prices.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
