MARKET COMMENTARY

DCE iron ore futures rose largely today, and the main contract closed 668.5, increased more than 5% for the day. the quotation in the morning was increased by 10-20 yuan/mt from last Friday. Most traders tended to negotiate on the price separately, and some steel mills purchased on demand. Today the overall market transaction atmosphere is acceptable. PBF at Shandong port dealt 710-725yuan/mt,increased 15-25 yuan/mt from last friday;SSF at Shandong port dealt 465-470, increased 10-30 yuan/mt from last friday; PBF at Tangshan port dealt 720-730 yuan/mt; increased 25-35 yuan/mt from last Friday. PBF at Jiangnei port dealt 760 yuan/mt; SMM analysis, the recently macro expected warming; Iron ore demand will improve under the expectation of steel mill resumption, and the stacking port exhaustion speed will slow down; And tangshan 13 D grade steel mills to grade C, the market for production limit expectations to relax, have formed a strong support for iron ore prices, short-term iron ore prices will continue to be strong shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
