MARKET COMMENTARY

DCE iron ore futures rose largely toda, and the main contract closed 702. an increase of 2.56% throughout the day. some traders quotation is still stronger,steel mills purchased on demand. Today the overall market transaction atmosphere is acceptable, and most trades were Speculation. PBF at Shandong port dealt 785-810 yuan/mt, increased 0-25 yuan/mt over yesterday; SSF at Shandong port dealt 500-502 yuan/mt, increased 10-22 yuan/mt over yesterday ; PBF at Tangshan port dealt 800-805 yuan/mt; increased 20 yuan/mt over yesterday; According to data tracked by SMM, 67 ships arrived at domestic main ports in December 13 – 19. Arrivals of cargoes are estimated to stand at 9.9 million mt, up 0.7 million mt from the previous week and down 6.91 million mt year on year.Shipments that departed Australian ports were estimated to increase 1.71 million mt week on week to 19.31 million mt, up 2.64 million mt on the year. And that from Brazilian ports increased 0.98 million mt to 4.8 million mt on a weekly basis, down 6.38 million mt on the year. The total arrivals of imported ore increased slightly from the prior week, and the combined shipments from Australia and Brazil also increased palpably. The blast furnaces in east, north-east, south-west and north-west China partly resumed their production after fulfilling their crude steel output control target, leading to more purchase demand. The iron ore prices hence gained momentum coupled with the support from the macro front. On the other hand, however, the shipments departing overseas ports and arriving at domestic ports both increased, pressuring iron ore prices to some extent as the port inventory was at a high level. In general, the iron ore prices will still carry some upside potential in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
