MARKET COMMENTARY

DCE iron ore futures tight, an decrease only 1.92% throughout the day; the main contract closed 663. the quotation in the morning was decreased by 10 yuan/mt over yesterday. some traders were active to sell, steel mills purchased on demand, Today the overall market transaction atmosphere is batter. PBF at Shandong port dealt 760-790 yuan/mt, decreased 5-30 yuan/mt over yesterday; SSF at Shandong port dealt 455-470 yuan/mt, decreased 10-30 yuan/mt over yesterday; PBF at Tanshan port dealt 780 yuan/mt; PBF at Jiangnei port dealt 800 yuan/mt. SMM analysis, recently affected by weather factors, building materials demand weakening, stacking winter storage is not as expected, directly affecting steel production, part of the blast furnace delay resumption, iron ore procurement demand is not as expected. On the other hand, close to the Winter Olympics, Tangshan environmental protection again strict, market worries have increased. In the short term iron ore prices continue to run shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
