MARKET COMMENTARY

DCE iron ore futures continued to fluctuate in a day, an increase only 0.98% throughout the day; the main contract closed 669.5. the quotation in the morning was increased by 5 yuan/mt over yesterday. some traders were active to sell, steel mills purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 780-795 yuan/mt, increased 0-25 yuan/mt over yesterday; SSF at Shandong port dealt 480 yuan/mt, increased 10-25 yuan/mt over yesterday; PBF at Tanshan port dealt 800-802 yuan/mt, increased 20-22 yuan/mt over yesterday; SMM statistics of blast furnace 79.34%, month-on-week continued to rise 1.99%, month-on-month up 2.43%. This week, the blast furnace operation rate picked up significantly. On the one hand, the production restrictions of southern steel enterprises have weakened, and many steel enterprises have resumed production of blast furnaces for a long time. On the other hand, central China and Eastern China have resumed production of blast furnaces for maintenance. Although restricted by the Winter Olympics and environmental protection factors, some blast furnaces in Handan and Tangshan of Hebei province are still delayed to resume production, but next week there will be blast furnaces in northeast, northwest, southwest, central and east China. Give mine price certain support, iron ore will still narrow shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
