MARKET COMMENTARY

DCE iron ore changed from strong to weak in the afternoon. the main contract I2309 closed 822.5. an decrease only 0.72% throughout the day; some traders were negative to sell, steel mills purchased on demand. Market wait-and-see sentiment increased. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 870-881 yuan/mt; prices are mixed today over yesterday. PBF at Tangshan port dealt 905 yuan/mt; increased 5 yuan/mt over yesterday. As of June 30th, the total inventory of 35 ports tracked by SMM was 123.56 million tons, a decrease of 500000 tons compared to last week and an increase of 1.38 million tons compared to the same period last year. The daily average port clearance volume of imported ore in this period increased by 37000 tons on a weekly basis to 2.987 million tons. Recently, the demand for iron ore has increased due to the increase in steel plant molten iron production. The port remains in a state of destocking. Supply faces strong support from mining prices. But this week, mining prices have continued to rise, increasing regulatory risks. Market rumors are circulating again, and ore prices are starting to decline.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
