MARKET COMMENTARY

DCE iron ore futures market falling trends, the main contract I2309 closed 834.5. an decrease of 2.68% throughout the day; Some traders adopt separate quotations. Some steel mills purchased on demand. today's overall market transaction atmosphere in general. PBF at Shandong port dealt 873-875 yuan/mt; decreased 15 yuan/mt over yesterday. PBF at Tangshan port dealt 875-880 yuan/mt; decreased 20-25 yuan/mt over yesterday. As of July 28th, the total inventory of 35 ports tracked by SMM was 120.98 million tons, a decrease of 1.06 million tons compared to last week and a decrease of 12.15 million tons compared to the same period last year. The daily average port clearance volume of imported mines in this period has accumulated to 302.7 tons on a weekly basis from 6000 tons. This week, steel prices have significantly increased, and steel mills have seen good shipments. In order to ensure profits, steel mills have increased their procurement efforts for iron ore. In the later stage, the impact of iron ore fundamentals is expected to weaken and fluctuate next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
